Information Security Engineer

About CorpAxe:

CorpAxe is the world leader in corporate access and resource management solutions for the investment community. The CorpAxe suite of products allows investors to discover, originate, manage, and value resources critical to the investment process, while meeting the demands of a rapidly changing regulatory environment.

What are we looking for?

We are a fast-growing SaaS company that is changing the FinTech application development (non-OMS) landscape. We are looking for an information security engineer who has experience with modern cloud technologies, secure platform architecture, security monitoring and investigations, third-party audits, vendor assessments, encryption and identity and access management. This role will involve all aspects of our cloud environments and tools, corporate collaboration, solutions architecture, and automation. Experience with DevSecOps methodologies and working in a security-first environment are a must.

This role reports into the CISO. You must enjoy working in a small, collaborative team that is focused on building a world-class application platform. If you are passionate about shaping the future of FinTech, this is the job for you.

Responsibilities:

- Ideate and implement new solutions to support our platform growth and changes
- Shape and develop our technology security solutions and policies
- Manage identity, access management, and security monitoring tooling
- Manage security scanning, monitoring and configuration management infrastructure
- Perform security forensics, advanced troubleshooting, and investigations
- Work closely with product management, operations, and the software development team
- Identify, track, and drive the mitigation of security risks

- Perform security reviews for designs and changes, vendor audits and support third-party audits
- The position is based in the NYC metro area, but we are currently working in a remote capacity.

Requirements:

Must Have:

- Microsoft Azure and 365 security experience
- Endpoint and perimeter security experience
- SIEM, security monitoring and alerting concepts and tools
- Web Application Firewalls
- Layered security and zero-trust concepts
- Data leakage prevention, data classification and retention concepts and tools
- Experience with global-scale Internet-facing web applications
- Experience in Windows and Linux based application architectures
- Thorough understanding of TCP/IP networking, DNS, firewalls, local and global load balancers
- SAML SSO, Azure Active Directory, Managed Identities
- Communications encryption, storage, and database encryption, KMS and certificate management
- Risk, Change, and Incident management experience
- PowerShell expertise
- Excellent communication and documentation skills
- 5+ years of experience as a full-time IT professional
- 3+ years of experience in the information security field

Nice to Have:

- CISSP, CCSP, SSCP or CSSLP certifications
- Microsoft/Office 365
- Azure DevOps
- DevSecOps concepts and tools
- Microsoft SQL
- Visual Studio

Education:

Bachelor's degree in a relevant field of study, commensurate experience, or certifications

Note to recruiters: CorpAxe does not accept unsolicited resumes from recruiters and/or placement agency resumes. We will not pay fees to any third-party agency or company that does not have a signed agreement with CorpAxe.
